ATION					
■CARRIE	ER				
●Carrier sp	ecificatio	n			
Maximum trave	ling speed	49 km/h			
Grade ability		57 % (computed at G.V.W. = 26,990 kg)			
Minimum turnin		4.9 m (4 wheel steer)			
(center of extrem	e outer tire)	8.2 m (2 wheel steer)			
●Engine					
Maker		Mitsubishi			
Model		6M60-TL			
Туре		4 cycle, 6 cylinders, water cooled, direct injection turbo-charged diesel engine with intercooling			
Piston displace	ment	7.545 L			
Max. power	THO THE	200 kW at 2,600 min ⁻¹			
Max. torque		785 N·m at 1,400 min ⁻¹			
	ommended	by KATO must be used			
●Equipmen		· · · · ·			
Drive system		Switches between 2 wheel drive (4x2) and 4 wheel drive (4x4)			
Torque converte	er	Engine mounted 3 elements, 1 stage (with lock up clutch)			
Transmission		Remote mounted full automatic			
Number of spec	eds	4 forward & 1 reverse speed (with Hi – Low selector)			
	Front	Planetary, drive/steer type			
Axles	Rear	Planetary, drive/steer type			
Suspension	Front & Rear	Taper – leaf spring, Hydraulic locking device with shock absorber			
	Service	Air-over hydraulic disk brake on 4 wheels			
	brake	(front and rear independent circuit)			
Brake system	Parking brake	Spring applied, electrically air released parking brake mounted on front axle, internal expanding type			
Auxiliary brake		Exhaust brake			
Stooring		Full hydraulic power steering, Completely independent front and rear steering			
Steering		(with automatic rear wheel steering lock system)			
	Front	385 / 95 R25 170E ROAD			
Tire size	Rear	385 / 95 R25 170E ROAD			
Fuel tank capad	city	300 L			
Batteries		(12 V – 120 AH) × 2			
Safety dev	vices				
		Emergency steering device,			
		Rear wheel steering lock system (automatic), Mis-shifting prevention system,			
		Brake fluid leak warning device,			
		Service brake lock,			
		Suspension lock, Engine overspeed alarm,			
		Radiator coolant level warning device,			
O 04 1 1		Air filter service warning device			
●Standard	equipmei				
•		Centralized lubricating system			
●Optional e	quipmen				
		Yellow rev light, Spark arrester, Rear view camera, Right side view camera			
■ GENER	AL Din	nensions			
Overall length		11,360 mm			
Overall width		2,620 mm			
Overall height		3,475 mm			
Wheel base		3,650 mm			
Treads	Front	2,170 mm			
11caus	Rear	2,170 mm			
Passenger cap	acity	One person			
	Gross weight	approx. 26,990 kg			
Gross vehicle weight	Front weight	approx. 13,000 kg			
-	Rear weight	approx. 13,990 kg			

- Stow the hooks in place before traveling.
 Before you use this machine, read the precautions in the instruction manual thoroughly to operate it correctly.
 KATO products and specifications are subject to improvements and changes without notice.

■Notes for the lifting capacity chart

When the outriggers are used

- The lifting capacity charts are based on the jib stowed on the boom side.
- 2. The lifting capacity chart indicates the maximum load which can be lifted by this crane provided it is level and standing on firm level ground. The values in the chart include the mass of the main hook and slings for boom operation, and auxiliary hook and slings for jib operation.[30 ton hook(mass:250kg),4 ton hook(mass:80kg)]
 - Within the chart the figures in the area bordered with a thick line are based on structural limitations while other figures are determined by stability limitations.
- 3. The working radii are the actual values allowing for boom and jib deflection. Therefore you must always operate the crane on the basis of the working radius.
- 4. The jib working radius is based on the jib mounted on the end of the 30.5m boom. When operating at other boom lengths, use the boom angle alone as the criterion.
- Do not operate the jib when the outriggers are completely retracted
- 6. The lifting capacities for the over sides vary with the outriggers extension width. Therefore for each outriggers extension condition you should work according the lifting capacity chart. Use the lifting capacity chart of outriggers full extension for both front and rear areas lifting capacities.

- 7. The lifting capacity of the rooster sheave is the lifting capacity of the boom minus the mass of all attached hook, slings etc. to the boom, with an upper limit of 4,000kg.
 - [The hook for use with the rooster sheave is the 4 ton hook(mass:80kg) with one part of line.]
- 8. If the boom length, boom angle and/or working radius exceeds the rated value, use the lifting capacity for the rated value or for the next one, whichever gives the smaller lifting capacity.
- 9. If you are working with the boom while the jib is rigged, subtract 2.2 ton plus the mass of all attached hook, slings etc. to the boom from the each lifting capacity of the boom, with an upper limit of 14 ton.
 - Do not use the rooster sheave in this situation. And do not operate the boom while the jib is rigged, when the outriggers are retracted.
- 10. In whatever working conditions the corresponding minimum boom angle is shown in the chart.
 - The crane can tip over if the boom is lowered below the minimum boom angle even if unloaded.
 - Therefore, never lower the boom below these angles.
- 11. The standard parts of line for each boom length are as indicated in the chart. If you work with a non-standard number of parts of line, do not exceed 37.2kN (3.8tf) per wire rope respectively.
- 12. Crane operation is permissible up to a wind speed of 10m/s. Even in relatively light wind conditions, extra care should be taken when handling loads presenting large wind catching areas.
- 13. Kato bears no liability whatsoever for damage, crane tipping or other accident caused by crane operations which differ from the directions contained in the instruction manual and the warning labels.

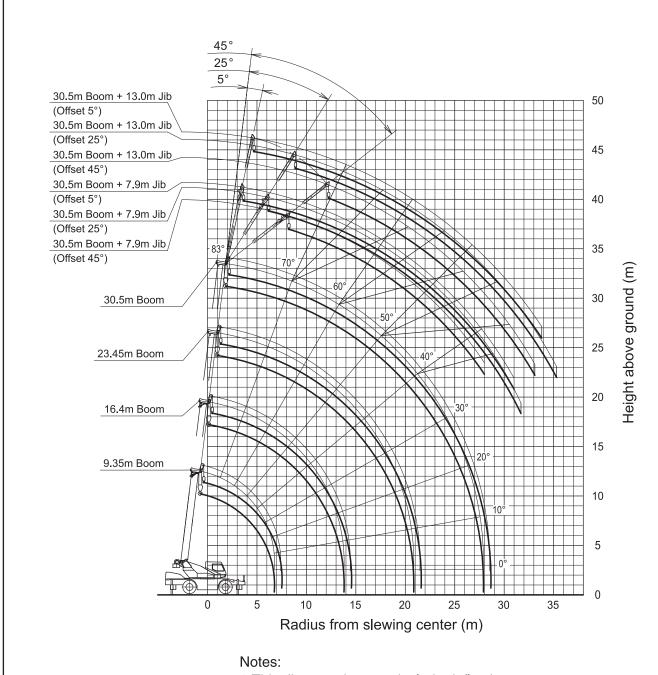

When the outriggers are not used

- The lifting capacity charts are based on the jib stowed on the boom side.
- 2. The lifting capacity chart indicates the maximum load the crane can lift when its body is level on firm level ground with all tires inflated to the rated pressure and the suspension cylinder completely retracted. The values in the chart include the mass of the main hook and slings.
 - Within the chart the figures in the area bordered with a thick line are based on structural limitations while other figures are determined by stability limitations.
 - [Rated tire pressure:900kPa (9.0bar)]
- The working radii are the actual values allowing for boom deflection. Therefore you must always operate the crane on the basis of the working radius.
- The lifting capacity differs between the front area capacity and the full range capacity.
 - When slewing from the front to the side, take care that the crane could not be over loaded.

Crane o	peration	Stationary crane-on-rubber operation	Pick and carry operation
Area	ıα°	1	1

- The lifting capacity of the rooster sheave is the lifting capacity of the boom minus the mass of all attached hook, slings etc. to the boom, with an upper limit of 4,000kg.
 - [The hook for use with the rooster sheave is the 4 ton hook(mass:80kg) with one part of line.]
- Do not work with the jib or with a boom length of more than 23.45m.
- For stationary crane-on-rubber operation, the parking brake and service brake lock device must be engaged.
- 8. For pick and carry operation, the super-slow speed switch must be switched to "ON" and the shift lever set to speed 1.
- For pick and carry operation, lower the load to just above the ground and keep your speed strictly below 2km/h to avoid swinging the load.
 - Take particular care to avoid sharp turns, sudden starts and stops
- Never operate the crane during pick and carry operation. The slewing brake must be applied.
- 11. If the boom length, boom angle and/or working radius exceeds the rated value, use the lifting capacity for the rated value or for the next one, whichever gives the smaller lifting capacity.
- 12. In whatever working conditions the corresponding minimum boom angle is shown in the chart.
 - The crane can tip over if the boom is lowered below the minimum boom angle even if unloaded.
 - Therefore, never lower the boom below these angles.
- 13. The standard parts of line for each boom length are as indicated in the chart. If you work with a non-standard number of parts of line, do not exceed 37.2kN (3.8tf) per wire rope respectively.
- 14. Crane operation is permissible up to a wind speed of 10m/s. Even in relatively light wind conditions, extra care should be taken when handling loads presenting large wind catching areas.
- 15. Kato bears no liability whatsoever for damage, crane tipping or other accident caused by crane operations which differ from the directions contained in the instruction manual and the warning labels.

- 1.This diagram does not include deflection of Boom and Fly jib.
- 2. The outriggers are fully extended.

■LIFTING CAPACITY

Based on ISO 4305 Not exceed 75% of static tipping loads
